

INVEST IN BALI AQUAPONICS | HAPPY IKAN SUSTAINABLE FOOD VENTURE

Welcome to the investment opportunity with Happy Ikan, based in North Bali — where sustainable food production meets modern business. By combining fish and vegetable cultivation in one closed-loop system, we are creating a farm that's not only good for the planet, but built for growth and profitability.

WHY AQUAPONICS? THE FUTURE OF FARMING

Aquaponics is a smart combination of aquaculture (fish farming) and hydroponics (plant growing) in one integrated system. Because fish provide nutrients for the plants and the plants clean the water for the fish, the system uses significantly less water, no chemical fertilisers, and produces both high-quality fish and vegetables. Studies show that aquaponics can use up to 90 % less water than traditional soil-based farming. This model is especially suited to premium markets such as eco-conscious restaurants, hotels and consumers — exactly the segment Happy Ikan is targeting in Bali.

OUR BUSINESS MODEL & MARKET OPPORTUNITY

We supply locally grown premium tilapia and organic vegetables to Bali's hotels, restaurants and sustainability-driven consumers. By cutting transport-distances, using plastic-free packaging and promoting freshness, we command premium pricing and build strong brand loyalty. The dual revenue streams — fish + produce — diversify risk and enhance growth potential. Commercial aquaponics ventures typically show ROI within 2-3 years when well managed.

IMPACT & SUSTAINABILITY — WHAT YOU ACHIEVE

As an investor, you're not just backing a farm — you're backing a positive environmental and social impact. Our system reduces water usage, avoids chemical fertilisers, supports local employment in Bali and contributes to a circular food economy. Investors focused on sustainability value these attributes.

INVESTMENT DETAILS & ROI POTENTIAL

We are currently seeking strategic partners to scale our operation. Your investment funds will go into system expansion, infrastructure improvements and market development. We offer transparent reporting, clear milestones and direct participation in our growth story. Typical commercial models in the sector show returns in the mid-term when the system hits steady production and premium markets.

OUR TEAM & WHY WE'RE THE RIGHT CHOICE

Our founding team blends sustainability experience, aquaculture know-how and local Bali operations. We've purchased land, set up the farm and are now in growth phase — meaning early investors benefit from reduced entry risk.
